MAXX-SERIES
DIGITAL POWER AMPLIFIERS

MA32/D

DATASHEET

FEATURES

- MA32/D is a cutting edge 32 channel power amplifier combining FPGA-based signal processing with advanced Class D power stages and universal power supply for global use in a 2U 19“ package.
- Each channel can deliver a power of 280W at 4 Ohm load with less than 1% THD.
- Despite the extremely compact design, the MA32/D achieves a channel separation of more than 70dB between adjacent channels. Distant channels typically reach 90dB.
- Each channel can be disabled in software. The even low IDLE power consumption of 165W can be further decreased by disabling unused channels.
- Advanced DSP-controlled power supply with PFC for almost sinusoidal current draw an all common line voltages (90 - 264V 50/60Hz).
- Web-based remote control makes usability straightforward and platform-independent. We reveal the complete protocol definition for integration in third party controller. We offer mDNS (Bonjour) and a proprietary simple UPD protocol to discover devices on your network. IP settings can be changed across IP subnet borders by the UDP implementation as well.
- The amplifier accepts MADI optical, 2x MADI coaxial, 2x AES3id and DANTE TM (Option IF1) as input. Channels can be patched smoothly between all interfaces. All inputs can also be used as the clock source.
- The optional DSP functionality (D1) offers per channel: 5 EQs, High- Lowpass up to 48dB/Oct, Peak limiter, Volume and Delay. For more advanced filtering FIR filters can be used (D2).
- The output current of all channels is measured and feed to a 20kHz detector. By adding a pilot tone by either the internal generator or an external source, the connection and voice coil of your speakers can be monitored. Threshold and debounce time is adjustable per channel. (M1)
- The „ramp volume at startup“ feature with adjustable time and the panic mute via UDP/IP functionality helps to react when errors in complex installations occur.
- IP and mute settings can be changed on the front panel. In normal operation, the LCD shows level meters of all 32-channels.
- The amplifier is protected against DC, overcurrent and overtemperature. A compressor with slow release time is responsible for limiting the maximum power drawn from the power line. The limitation smoothly reduces the gain at all channels simultaneously so that no acoustic picture distortion will occur in overload situations.
- The Fans are temperature controlled and switchable between low noise and high power mode.
